/note="Vector: pMEJBS-FLJ; Site 1: XhoI; Site 2: XhoI; The library was prepared from polyA+ RNA from seedlings grown in hydroponic culture. At 8 days of age, medium was supplemented with 0.5 mM 1-aminocyclopropane-1-carboxylic acid (ACC) to induce endogenous ethylene (ETH) production. Roots and shoots were harvested after 27 and 72 hr and material from both time points was combined prior to RNA isolation. Double-stranded cDNA was cloned unidirectionally into different braIII sites of the pMEJBS-FL3 vector (5-prime DraIII site is CACTGTGTG, 3-prime DraIII site is CACTGTGTG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /db_xref="taxon:4558"
